NOTICE OF ALLOWANCE

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 17, 2009 has been entered.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: Applicant's amendments and arguments are convincing and have resulted in withdrawal of the remaining rejections. While Shimizu (JP 4-350148) is particularly relevant to the claimed subject matter, Shimizu is deficient in that it does not teach having a magnesium content as required by the pending claims. As noted in applicant's specification (e.g. on page 22, lines 10-17), the Mg content breaks up the oxidation film and therefore improves the brazing properties of the stainless steel. While the secondary reference of Yamanaka (U.S. Patent 4,784,984) does indicate that adding Mg to stainless steel can improve the oxidation resistance (e.g. column 4, lines 24-41), Yamanaka's stainless steel is a direct solidification ribbon and therefore has different processing considerations than the ingot rolled stainless steel sheets of the Shimizu primary reference. Since Yamanaka discloses that adding Mg would degrade rollability and

Shimizu's sheets are formed by rolling, one of ordinary skill in the art would not consider Yamanaka teachings (using directly solidified sheets) to be a teaching to add Mg content to Shimizu's rolled sheets. In addition, Shimizu also differs from the pending claims in that Shimizu fails to require both La and Ce in the stainless steel composition. Applicant teaches in applicant's specification (e.g. page 21, lines 21-27) that oxidation resistance can be guaranteed if each is present at 0.01% or greater. While Shimizu does allow for additional inclusion of other lanthanides than La, Shimizu does not teach for the specific combination of both La and Ce in the claimed ranges. Of particular importance, it should be noted that although Shimizu allows for set upper limits of Si, Mn, P, Ni and Cu, Shimizu clearly states that investigation of grain boundary cracks shows that these elements are particularly harmful and thus establishes an upper limit for these elements. This is not a positive teaching to include each of these elements, but rather a teaching to allow no more than these upper limits if any of these elements are present in the alloy. In view of the above, one of ordinary skill in the art would not be led to produce an alloy meeting the requirements of independent claim 1 from the teachings of Shimizu, alone, or in combination with the other prior art of record in this application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John J. Zimmerman whose telephone number is (571) 272-1547. The examiner can normally be reached on 8:30am-5:00pm, M-F. Supervisor Jennifer McNeil
